MT E Series Overview

MT provides more than 20 E Series modules for measurement, control, and communication applications. E Series modules can connect to any sensor or bus and allow for high-accuracy measurements that meet the demands of advanced data acquisition and control applications.

- Measurement-specific signal conditioning that connects to an array of sensors and signals

- Isolation options such as bank-to-bank, channel-to-channel, and channel-to-earth ground

- -40 °C to 70 °C temperature range to meet a variety of application and environmental needs

- Hot-swappable

The majority of E Series modules are supported in both RobustRIO and FlexDAQ platforms and you can move modules from one platform to the other with no modification.

RobustRIO

RobustRIO combines an open-embedded architecture with small size, extreme ruggedness, and E Series modules in a platform powered by the Redefinable I/O (RIO) architecture. Each system contains an FPGA for custom timing, triggering, and processing with a wide array of available modular I/O to meet any embedded application requirement.

FlexDAQ

FlexDAQ is a portable, rugged data acquisition platform that integrates connectivity, data acquisition, and signal conditioning into modular I/O for directly interfacing to any sensor or signal. Using FlexDAQ with LabVIEW, you can easily customize how you acquire, analyze, visualize, and manage your measurement data.

Software

LabVIEW Professional Development System for Windows

- Use advanced software tools for large project development

- Use advanced measurement analysis and digital signal processing

- Take advantage of open connectivity with DLLs, ActiveX, and .NET objects

- Build DLLs, executables, and MSI installers
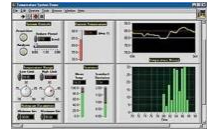

LabVIEW FPGA Module

- Design FPGA applications for MT RIO hardware

- Program with the same graphical environment used for desktop and real-time applications

- Execute control algorithms with loop rates up to 300 MHz

- Implement custom timing and triggering logic, digital protocols, and DSP algorithms

- Incorporate existing HDL code and third-party IP including Xilinx IP generator functions
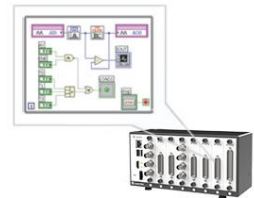

LabVIEW Real-Time Module

- Design deterministic real-time applications with LabVIEW graphical programming

- Take advantage of built-in PID control, signal processing, and analysis functions

- Automatically take advantage of multicore CPUs or set processor affinity manually

- Take advantage of real-time OS, development and debugging support, and board support
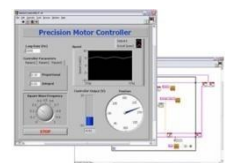

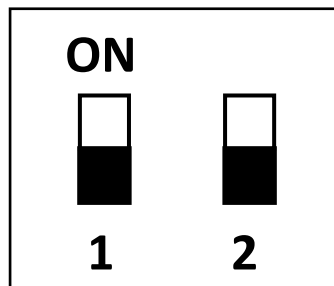

AC/DC Coupling

You can configure each channels in hardware for AC or DC coupling. For channels set to AC coupling, you can turn the the IEPE excitation current on or off.

Channel-to-channel	None
Channel-to-earth ground	None

Measurement Category I is for measurements performed on circuits not directly connected to the electrical distribution system referred to as MAINS voltage. MAINS is a hazardous live electrical supply system that powers equipment. This category is for measurements of voltages from specially protected secondary circuits. Such voltage measurements include signal levels, special equipment, limited-energy parts of equipment, circuits powered by regulated low- voltage sources, and electronics.
